MEDICAL DECISION MAKING:

43 year old male arrives with^[KC.1] concerns for acute alcohol intoxication as well as reports of right hand and left foot pain.^[KC.3]

On initial exam^[KC.1] somnolent but arousable to voice. Head atraumatic. Cardiac RRR, normal S1-S2. Lungs CTAB. Abdomen soft no distention or TTP. No asterixis or tremor. Examination of the right hand shows no obvious deformity, edema, or erythema. He's able to go through full range of motions including making a fist and extension. Unable to point out any area of discomfort. Or hand seems neurovascularly intact. Exam of his left foot shows no obvious injury including no evidence of any erythema, deformity, or edema. No evidence of any overlying bruising. Able to palpate the entire foot and ankle without difficulty and no concerns with range of motion and no pain.

At this time patient does seem acutely intoxicated. He is well known to the department. His x-ray show no evidence of a acute fracture. On his right hand does have evidence of healing fractures but these likely are more chronic. On discussion with patient he is agreeable for voluntary admission to Mallory for alcohol withdrawal. He currently has no evidence of alcohol withdrawal as he seems acutely intoxicated. Will obtain labs and observe until metabolize his to sobriety with planned transfer to Mallory.

Patient was breath lines multiple times throughout his stay here and was provided with food and water. Had instead attempted to hydrate him through oral rather than IV per patient preference. Able to maintain his airway the entire time.

At time of shift change patient will be handed off to Steve Miner for planned transfer to the Mallory center. Patient's most recent breathalyzer has been approximately .342. He currently has no signs of delirium tremens or evidence of Wernicke's encephalopathy. Patient will be handed off to my colleague.^[KC.3]

[KC]

2132 I took over patient care from Kelly Colleton pending patient's alcohol level to come down to a level acceptable for the Mallory crisis Center. Patient is requesting help over the Mallory crisis Center. Did review labs and saw that his potassium level was slightly low at 3.2. Did order 20 mEq of p.o. potassium as he was now awake and alert. Patient has been eating a sandwich and his alcohol level has continued to trend down. Mallory crisis Center is agreeable to take patient for further evaluation. Did contact hospital transport and they will not be able to take patient until 8:00 p.m.. Patient advised of this finding and he was subsequently transported the Mallory crisis Center without complication. Please see Kelly Colleton's complete dictation for history physical assessment and plan. Will encourage him to increase dietary potassium as well. [SM]

· XR Foot 3 or More Views LT	IMPRESSION: 1. No acute fracture or malalignment.	Kelly B Colleton, PA-C	07/15 1019
·  Ethanol: 525.6	(Reviewed)	Kelly B Colleton, PA-C	07/15 1204
· XR Hand 3 or More Views RT	IMPRESSION: 1. No new fracture or malalignment. 2. Healing fracture of the 4th metacarpal head is noted. 3. Old healed 5th metacarpal head fracture also seen.	Kelly B Colleton, PA-C	07/15 1821
·	I took over patient care from Kelly Colleton pending patient's alcohol level to come down to a level acceptable for the Mallory crisis Center. Patient is requesting help over the Mallory crisis Center. Did review labs and saw that his potassium level was slightly low at 3.2. Did order 20 mEq of p.o. potassium as he was now awake and alert. Patient has been eating a sandwich and his alcohol level has continued to trend down. Mallory crisis Center is agreeable to take patient for further evaluation. Did contact hospital transport and they will not be able to take patient until 8:00 p.m.. Patient advised of this finding and he was subsequently transported the Mallory crisis Center without complication. Please see Kelly Colleton's complete dictation for history physical assessment and plan. Will encourage him to increase dietary potassium as	Steven R Miner, PA-C	07/15 2132

XR Hand 3 or More Views RT (Final result)

Result time 07/15/26 10:15:59

Final result by Jonathan D Hester, MD (07/15/26 10:15:59)

Impression:

1. No new fracture or malalignment.
2. Healing fracture of the 4th metacarpal head is noted.
3. Old healed 5th metacarpal head fracture also seen.

Electronically Signed by: Jonathan Hester 7/15/2026 10:15 AM

Narrative:

EXAMINATION: XR HAND 3 OR MORE VIEWS RT

REASON FOR EXAM: Right hand pain

COMPARISON: May 26, 2026.

COMMENTS:

Fracture: No new fracture or malalignment. Healing fracture of the 4th metacarpal head is noted. Old healed 5th metacarpal head fracture also seen.
Degenerative Changes: No significant degenerative changes are identified.
Other: Unremarkable.

XR Foot 3 or More Views LT (Final result)

Result time 07/15/26 10:14:28

Final result by Jonathan D Hester, MD (07/15/26 10:14:28)

Impression:

Imaging Results (continued)

1. No acute fracture or malalignment.

Electronically Signed by: Jonathan Hester 7/15/2026 10:14 AM

Narrative:

EXAMINATION: XR FOOT 3 OR MORE VIEWS LT

REASON FOR EXAM: Left foot pain

COMPARISON: No relevant studies available for comparison.

COMMENTS:

Fracture: No evidence of an acute fracture.

Degenerative Changes: No significant degenerative changes are identified.

Other: Unremarkable.
