CT Guided Abscess Drain

Result Date: 7/20/2026

1. Uneventful CT-guided placement of 12 French drain within a large right perinephric abscess.

RECOMMENDATIONS: Routine IR drainage tube in 7-10 days Electronically Signed by: Thomas Derby
7/20/2026 3:15 PM

XR Chest 1 View

Result Date: 7/20/2026

1. Interval advancement of right-sided chest tube with decrease in hydropneumothorax. Electronically Signed
by: John Erogul, MD 7/20/2026 11:08 AM

XR Chest 1 View Post Procedure

Result Date: 7/20/2026

1. Interval placement right-sided thoracostomy tube with sidehole possibly within the chest wall rather than in
the pleural space, recommend advancement. 2. Interval enlargement of right-sided hydropneumothorax, now
with associated leftward mediastinal shift suggesting tension component. Critical findings discussed with Dr.
Thai at 10:08 AM 7/20/2026 Electronically Signed by: Thomas Derby 7/20/2026 10:09 AM

XR Chest 1 View

Result Date: 7/20/2026

1. Moderate hydropneumothorax, right side. Electronically Signed by: Stephen Loos, MD 7/20/2026 8:22 AM

CT Abdomen Pelvis W IV Cont

Result Date: 7/20/2026

1. Moderate right effusion and small right pneumothorax. 2. Bulky, multilocular perinephric space fluid
collection lining the margin of the right kidney compatible with large perinephric abscess. Internal air, within the
fluid collection noted. 3. Heterogeneous enhancement of the right kidney, with delayed excretion, question
globally decreased function related to advanced pyelonephritis. Electronically Signed by: Stephen Loos, MD
7/20/2026 7:35 AM

US Abdomen Limited

Result Date: 7/20/2026

1. Limited exam with imaging of the liver. Other organs not seen well. 2. Diffuse echogenic foci lining the liver
likely representing free intraperitoneal air. Correlate with CT. Electronically Signed by: Stephen Loos, MD
7/20/2026 6:31 AM^[PH.2]

ED Provider Notes (continued)**ED Provider Notes by Priscilla Henson, MD (continued)**

07/20/26 0523

MEDICAL DECISION MAKING:

59 year old female presented^[PH.1] with abdominal pain. Differential diagnosis includes bowel obstruction, appendicitis, gallbladder pathology, ureterolithiasis, UTI, pancreatitis, colitis, diverticulitis, perforated viscus, other intra abdominal pathology etc. Doubt vascular catastrophe, atypical ACS based on history and physical.^[PH.3]

Source: History was obtained from^[PH.1] patient^[PH.3]

External medical records independently reviewed include:^[PH.1] clinic notes from 6/25/26^[PH.3]

Labs independently reviewed and interpreted by me:^[PH.1] Significant leukocytosis of 27.8, normal creatinine and BUN. Elevated platelet count, likely reactive, elevated glucose of 210, possibly reactive versus indicative of undiagnosed diabetes.^[PH.3] Elevated lactic acid of 4.1^[PH.4]

Imaging independently reviewed and interpreted by me:^[PH.1] CT images which show small pneumothorax, pleural effusion, extremely large right perinephric abscess.^[PH.4]

EKG:^[PH.1] NA^[PH.4]

ED Course:^[PH.1]

On reevaluation, patient is well-perfused, tachycardic but maintaining normal BP. 2 L IV fluids given for total of 30 cc/kg.^[PH.4]

ED Course as of 07/21/26 0130**Mon Jul 20, 2026**

- 0611 Patient unable to tolerate US, imaging not completed, will give more morphine and CT ordered. ^[PH]
- 0724 I discussed the case with Dr. Loos who feels that the patient seems to have a large perinephric abscess. I was able to talk to Dr. Derby, interventional radiologist who is agreeable to take the patient for drainage today. I also consulted and discussed the case with Dr. Nixon, urology, he will review CT scan for signs of ureteral obstruction. ^[PH]

ED Course User Index^[PH] Priscilla Henson, MD**Clinical Impressions as of 07/21/26 0130**

Sepsis (HCC)
Perinephric abscess
Hyperglycemia
Pleural effusion
Pneumothorax, unspecified type^[PH.2]

This patient required the following parenteral medications:^[PH.1] Morphine, Zofran, Dilaudid. Vancomycin, Zosyn.^[PH.4]

ED Provider Notes (continued)**ED Provider Notes by Priscilla Henson, MD (continued)**

07/20/26 0523

The following medications, which require intensive monitoring due to high risk of morbidity/mortality, were given or considered:^[PH.1] Morphine, Zofran.^[PH.4]

Procedures:^[PH.1] NA^[PH.4]

Consultations: The case was discussed with the following providers:^[PH.1] See ED course^[PH.4]

Critical Care:^[PH.1] Critical care time: Upon my evaluation, this patient had a high probability of imminent or life-threatening deterioration due to Sepsis which required my direct attention, intervention, and personal management. I have personally provided 35 minutes of critical care time exclusive of time spent on separately billable procedures. Time includes review of laboratory data, radiology results, discussion with consultants, and monitoring for potential decompensation. Interventions were performed as documented above.^[PH.4]

Sexually transmitted infection screening, including syphilis was offered if appropriate.

FINAL DIAGNOSES:^[PH.1]

Final diagnoses:

Sepsis (HCC)

Perinephric abscess

Hyperglycemia

Pleural effusion

Pneumothorax, unspecified type^[PH.2]

Secondary Diagnoses: The patient is suffering from the following comorbid conditions which complicate their care and may put them at higher risk:^[PH.1] NA^[PH.4]

Social Determinants of Health: Additionally the patient's health is significantly affected by certain social determinants of health including:^[PH.1] NA^[PH.4]

DISPOSITION:^[PH.1]

Admission: This patient is at risk for decompensation therefore requires hospitalization for a higher level of care. Discussed management of the patient with the hospitalist and they agree. Hospitalist will admit the patient.^[PH.4]

Prescription management:^[PH.1] NA^[PH.4]

Priscilla Henson, MD^[PH.2]

Imaging Results

CT Guided Abscess Drain (Final result)

Result time 07/20/26 15:15:15

Procedure changed from IR Abscess Drain

Final result by Thomas A Derby, DO (07/20/26 15:15:15)

Impression:

1. Uneventful CT-guided placement of 12 French drain within a large right perinephric abscess.

RECOMMENDATIONS: Routine IR drainage tube in 7-10 days

Electronically Signed by: Thomas Derby 7/20/2026 3:15 PM

Narrative:

HISTORY: Large right-sided perinephric abscess

COMPARISON: CT of the abdomen and pelvis performed earlier on the same day

12 MONTH CT TOTAL:1

TECHNIQUE: Emergent two-physician consent was obtained as the patient was unable to consent herself this time. A proper timeout was performed prior to the start of the procedure. Automated dose control was utilized for CT scan performed for localization purposes and any post procedure scans performed.

The patient was placed in the left lateral decubitus position on the CT gantry, and was prepped and draped in usual sterile manner. Local anesthesia was administered to the skin and subcutaneous soft tissues. Using intermittent CT/fluoroscopic guidance, an 5 French needle was advanced into the right perinephric fluid collection. Purulent fluid was aspirated. Next, a 0.035 inch Amplatz guidewire was placed through the needle and coiled within the fluid collection. After dilatation of the tract a 12 French locking loop multipurpose pigtail catheter was placed within the collection. A sample of the fluid was sent to the lab for microbiological analysis. A vacuum drainage bag collection system was attached to the catheter and the catheter was secured.

FINDINGS: Large right perinephric abscess.

COMPLICATIONS: None.

MEDICATIONS: Moderate sedation was administered by interventional radiology nursing staff under the personal supervision of the Attending Interventional Radiologist. Adequate analgesia and anxiolysis was obtained using intermittent, titrated dosages of Fentanyl and Midazolam with constant monitoring of patient's vital signs and telemetry. Please see the nursing records for details regarding medication dosages.

SUPERVISED SEDATION: A trained independent observer was present during sedation. Intended level of sedation: moderate. Total sedation time: 12 minutes. Sedation start time: 1416, sedation end time: 1428.

Imaging Results (continued)

CT Abdomen Pelvis W IV Cont (Final result)

Result time 07/20/26 07:35:39

Final result by Stephen Loos, MD (07/20/26 07:35:39)**Impression:**

1. Moderate right effusion and small right pneumothorax.
2. Bulky, multilocular perinephric space fluid collection lining the margin of the right kidney compatible with large perinephric abscess. Internal air, within the fluid collection noted.
3. Heterogeneous enhancement of the right kidney, with delayed excretion, question globally decreased function related to advanced pyelonephritis.

Electronically Signed by: Stephen Loos, MD 7/20/2026 7:35 AM

Narrative:

EXAMINATION: CT ABDOMEN PELVIS W IV CONT

INDICATION: 59 years old, Female. Abdominal pain, acute, nonlocalized

COMPARISON: None

TECHNIQUE: Multiple axial helical sections from the level of the hemidiaphragms to the lesser trochanters with intravenous contrast. All CT scans at this facility use dose modulation, iterative reconstruction, and/or size-based dosing when appropriate to reduce radiation dose to as low as reasonably achievable. Contrast was administered per approved written protocol.

The patient has had 0 other CT scans within the last 12 months.

CONTRAST: 95mL ISOVUE 370.

FINDINGS:

Lung bases: Moderate right pleural effusion. Small anterior right pneumothorax.
Heart: Visualized heart unremarkable.

Liver: Large complex cystic mass, appears to extrinsically invaginate along the lower margin of the right lobe of the liver. The mass appears to marginate and primarily involve the perinephric space on the right, components extend along the lateral margin of the kidney, extending cranial and caudal with discernible wall, internal complexity and marginal enhancement. There is air density, lining in particular the upper aspect of the cyst. In total measuring approximately 22 cm craniocaudal, 11.5 cm transversely, 14.5 cm AP.

Gallbladder: Cholelithiasis. No surrounding inflammation.

Bile ducts: Unremarkable.

Pancreas: Normal.

Spleen: Unremarkable.

Adrenal glands: Normal.

Kidneys: As above, involving the right kidney with large multilocular fluid collection and marginal enhancement occupying the perinephric space. Kidney is diffusely heterogeneous, and low density throughout, on delayed imaging.

Probable globally decreased function. No excretion of contrast is seen into the intrarenal collecting system. There is early enhancement of the urothelium along the collecting system and pelvis.

Vasculature: Unremarkable.

Lymph nodes: No pathologically enlarged abdominal or pelvic lymph nodes according to size criteria.

Imaging Results (continued)

Bowel: No bowel wall thickening or obstruction identified.
 Intraperitoneal space: No free air or free fluid.
 Bladder: Unremarkable.
 Reproductive: Unremarkable.
 Regional skeleton: No worrisome bone lesion.
 Other: Unremarkable.

US Abdomen Limited (Final result)

Result time 07/20/26 06:31:29

Final result by Stephen Loos, MD (07/20/26 06:31:29)**Impression:**

1. Limited exam with imaging of the liver. Other organs not seen well.
2. Diffuse echogenic foci lining the liver likely representing free intraperitoneal air. Correlate with CT.

Electronically Signed by: Stephen Loos, MD 7/20/2026 6:31 AM

Narrative:

EXAM: US ABDOMEN LIMITED

TECHNIQUE: Routine sonographic examination of the right upper quadrant was performed.

HISTORY: Abdominal pain, RUQ.

COMPARISON: None available.

FINDINGS:

Limited exam. The patient was unable to tolerate the entire scan. Images of the liver, demonstrate mild internal heterogeneity. Nodular contour. Echogenic foci with artifact lining the liver capsule. No discrete mass.
