CHIEF COMPLAINT:**Chief Complaint**

Patient presents with

- Fever
- Hypotension

MODE OF ARRIVAL:*Private Transportation***HISTORY OF PRESENT ILLNESS:**

63 year old male presents with past medical history of malignant melanoma with metastasis to the brain as well as to his right clavicle with chief complaint today of fever and general unwellness. Patient states last 2 days he's felt really under the weather and is probably had a subjective fever. Today he went to his oncologist appointment and was found to have a fever there and was recommended to come here for further workup. Patient states that over the last 2 weeks since having radiation and new medications he has had a decreased appetite due to taste change of foods. Patient has also had a mild headache all week described currently as frontal pressure mild 2/10 and consistent with his normal headaches. Patient denies any cough or sore throat but has had a mildly runny nose described as thin and clear. Patient has no sinus pressure or pain no hearing pain and is able to place his chin to his chest with no neck pain described. Patient states he has not had any chest pain or abdominal pain, denies dysuria though his urine output looks dark to him even though he has been trying to drink plenty of water. Patient denies any flank pain and has not had any nausea vomiting or diarrhea. Patient has not had any known sick contacts, has not traveled, and is supposed to have radiation therapy starting on Wednesday for his bone cancer on the right clavicle. Patient was going to have targeted radiation therapy to per his brain lesions however on repeat MRI just last month his number of lesions had tripled and the sizes head increased. Patient denies any recent IV access and has no ports or central lines. Patient denies any open wounds. All other review of systems negative for acute concern.

PAST MEDICAL HISTORY:**Past Medical History:**

Diagnosis	Date
• Cancer (HCC) <i>malignant melanoma</i>	1/2025

PHYSICAL EXAM:**Vitals**

	07/20/26 1613
BP:	136/67
Pulse:	79
Temp:	(!) 39.1 °C (102.3 °F)
Resp:	18
Height:	188 cm (6' 2")
Weight:	81.2 kg (179 lb)
SpO2:	92%
BMI	22.97
(Calculated):	

General: Well nourished, nontoxic but chronically ill in appearance, awake and alert.

Head: Normocephalic

Eyes: Pupils equal, round, and briskly reactive, extraocular movements intact, anicteric, conjunctiva pink and moist without drainage.

ENT: Mucous membranes are pink, intact, and mildly dry. Oropharynx without erythema or exudates. Neck supple with no JVD, no thyromegaly, no lymphadenopathy appreciated. Patient easily places chin to chest with no meningeal symptoms present.

Cardiac: S1-S2 with regular rate and rhythm, no murmurs rubs or gallops appreciated. 3+ radial and pedal pulses with no dependent edema.

Respiratory: No respiratory distress with clear and equal bilateral lung sounds throughout. No wheezes rales or rhonchi, no use of accessory muscles present.

GI: Non-distended, soft, nontender to palpation with no guarding or rebound tenderness. No pulsatile masses, no hepatosplenomegaly. Normoactive bowel sounds without changes in tympany. No CVA tenderness bilaterally.

Musculoskeletal: No gross deformities with full active range of motion x4. Obvious increased a lump to the right clavicle about mid clavicle noted with no tenderness present with no known malignancy to this site.

Skin: Normal skin tone, warm, dry. No rashes, lesions, bruises, or open areas.

Neuro: Awake, alert, oriented x4 with clear and appropriate speech. 5/5 strength in all extremities with sensation intact.

Psych: Calm, cooperative, denies suicidal ideation today or in the last 30 days.

ED Provider Notes (continued)**ED Provider Notes by Kristin Knowles, APRN (continued)**

07/20/26 1659

This patient required the following parenteral (intravenous) medications:[KK.1] Vancomycin, LR bolus, LR maintenance and fusion, 4 to has[KK.4]

The patient received the following medications which required intensive monitoring due to high risk of morbidity/mortality:[KK.1] N/A[KK.4]

Additional ED course/events:[KK.1]

Patient arrived febrile at 39.1 C but hemodynamically stable currently but shortly after triage patient's repeat blood pressure was noted to be hypotensive in the 80s over 40s with no tachycardia present. Patient is currently being treated for metastatic cancer to the brain and the bones and states that he has been feeling under the weather for the last 2 days. For this reason sepsis protocol was initiated and with no recent hospitalizations or antibiotic use I did order both for 2 has and vancomycin for fever of unknown origin though I do have high suspicion for bacteremia as patient has no other symptoms other than the fatigue and fever. Patient completed his chemotherapy awhile ago but is currently on radiation therapy and has no meningeal symptoms to indicate likelihood of meningitis and for this reason LP is not recommended. I am still waiting on a urinalysis and chest x-ray and came back negative for acute findings. The rest of his labs show no leukocytosis, no anemia with a significant thrombocytopenia and moderate hyponatremia with mildly elevated AST but no other liver enzymes that are elevated. Patient's blood glucose is minimally elevated and with IV fluid bolus for the hypotension ordered reassessment shows low normal blood pressures present and heart rate decreased by 20 points into the 50s with reassessment showing patient is asymptomatic with this bradycardia. Patient's oxygen saturations remain greater than 90% on room air and chest x-ray was found to be reassuring. Through shared decision-making with the patient especially in lieu of his immunosuppressed status with a fever that high I do believe that we need to treat for empiric bacteremia and patient agrees with admission. For this reason hospitalist was contacted and patient accepted. Patient's vitals remained stable throughout his stay while still awaiting urinalysis to be obtained. Patient currently with admission orders waiting for bed assignment be transferred upstairs.[KK.4]

ED Course as of 07/20/26 1847**Mon Jul 20, 2026**

- 1725 White count is non elevated at 4.6 with no anemia and positive for severe thrombocytopenia with platelets of 78,000. [KK]
- 1751 No acute cardiopulmonary finding per radiologist's review of chest x-ray. [KK]
- 1751 Twelve lead EKG performed at 4:36 p.m. seen by an ER physician at that same time shows sinus rhythm at a rate of 77 with no significant ST elevations or depressions, no hyperacute or peaked T-waves, positive for partial bundle branch block noted, no T-wave inversion, no QT or QTC prolongation and no axis deviation. [KK]
- 1755 CMP shows moderate hyponatremia with sodium of 124, no significant trimmed MI notice though his AST is minimally elevated at 48 and normal renal function with blood glucose of 111. There is no anion gap present. [KK]
- 1757 Magnesium level is normal at 1.8. [KK]
- 1758 Lactic is non elevated indicating sepsis not present. [KK]
- 1844 Hospitalist contacted for admission. Bed request placed now. [KK]

Critical care note:

I have personally provided 46 minutes of discontinuous critical care time seeing, evaluating, and treating this patient. This time is exclusive of time spent on separate procedures. Upon my evaluation, this patient had a high probability of imminent or life-threatening deterioration due to possible sepsis with immuno compromised patient and unknown source of fever with hypotension, which required my direct attention, intervention, and personal management. Time includes review of laboratory data, radiology results, discussion with consultants, and monitoring for potential decompensation. Interventions were performed as documented in this note.^[KK.4]

Value	Comment	By	Time
.	White count is non elevated at 4.6 with no anemia and positive for severe thrombocytopenia with platelets of 78,000.	Kristin Knowles, APRN	07/20 1725
.	No acute cardiopulmonary finding per radiologist's review of chest x-ray.	Kristin Knowles, APRN	07/20 1751
.	Twelve lead EKG performed at 4:36 p.m. seen by an ER physician at that same time shows sinus rhythm at a rate of 77 with no significant ST elevations or depressions, no hyperacute or peaked T-waves, positive for partial bundle branch block noted, no T-wave inversion, no QT or QTC prolongation and no axis deviation.	Kristin Knowles, APRN	07/20 1751
.	CMP shows moderate hyponatremia with sodium of 124, no significant trimmed MI notice though his AST is minimally elevated at 48 and normal renal function with blood glucose of 111. There is no anion gap present.	Kristin Knowles, APRN	07/20 1755
.	Magnesium level is normal at 1.8.	Kristin Knowles, APRN	07/20 1757
.	Lactic is non elevated indicating sepsis not present.	Kristin Knowles, APRN	07/20 1758
.	Hospitalist contacted for admission. Bed request placed now.	Kristin Knowles, APRN	07/20 1844

	Diagnosis	--		
		Normal sinus rhythm		
		Normal ECG		
		When compared with ECG of 09-Jul-2026 10:48,		
		No significant change was found		
		Confirmed by Walther, RYANNE (33) on 7/21/2026 10:11:39 AM		

Imaging Results

XR Chest 1 View (Final result)

Result time 07/20/26 17:31:01

Final result by Jonathan D Hester, MD (07/20/26 17:31:01)**Impression:**

1. No acute cardiopulmonary finding.

Electronically Signed by: Jonathan Hester 7/20/2026 5:31 PM

Narrative:

EXAMINATION: XR CHEST 1 VIEW

INDICATION: 63 years old, Male. Fever of unknown origin in the setting of immunosuppression for cancer therapy

COMPARISON: May 18, 2026 CT chest.

FINDINGS:

Support lines and hardware: None.

Heart size: Heart size within normal limits.

Mediastinum: Mediastinal contour unremarkable. No pneumomediastinum.

Lungs: Lungs clear. No evidence of pneumothorax.

Other: Unremarkable.
