History of Present Illness

Chief Complaint: **Chief Complaint:** SEVERE ABD PAIN

HPI: 87-year-old female presents with severe right upper quadrant abdominal pain that began 4 hours prior to arrival. She reports similar pain to a lesser degree last night that resolved spontaneously. She denies fever but reports associated nausea without vomiting. She denies any changes in her stool character.

Past Medical/Surgical/Family/Social History

Past Medical History:

GENERAL: Ill appearing and well nourished. In Pain.

SKIN: No rashes. Warm without jaundice or cyanosis.

HEAD: Normocephalic, atraumatic.

EYES: Pupils are equal, round and reactive to light. Extraocular muscles are intact. Without injection. scleral icterus present.

EARS: Normal external inspection. Hearing is grossly intact.

NOSE: No external lesions. Nasal mucosa pink and non-inflamed.

MOUTH/THROAT: Airway is patent without oropharyngeal edema/erythema. Moist mucous membranes.

NECK: Supple, without masses. Trachea midline

CHEST/LUNGS: Clear to auscultation bilaterally. Symmetrical with equal breath sounds.

Cardiovascular: Regular rate and rhythm. No murmurs noted. Strong and equal pulses b/l. No lower extremity edema noted.

ABDOMEN: Soft and non-distended with right upper quadrant and epigastric tenderness.. Normal bowel sounds. No guarding, rigidity or rebound tenderness. No palpable masses

Point of care ultrasound fast exam with normal caliber aorta, no free fluid, and distended gallbladder

MADISON COUNTY MEMORIAL HOSP.
224 NW CRANE AVE, MADISON, FL 32340 - 850-973-2271

Patient Name: SALLY ADAMS

DOB: 05/11/1939

MRN: 60242

Account #: 1073266

Note Type: ED Physician Note

MUSCULOSKELETAL: Normal ROM, No deformity or TTP

NEUROLOGIC: GCS 15, No focal weakness. Normal gait

PSYCHIATRIC: Mood and affect are appropriate for age.

ED Course

2300 - Extensive conversation with the patient and spouse at bedside regarding findings, differential diagnosis, and need for escalation of care involving transferred to higher level of care for further evaluation and management. They voiced understanding and are in agreement with the plan.

0050 - Case discussed with Dr. Lester, ED attending at SGMC who accepts the patient transfer.

0100 - patient tolerating IV fluid bolus well and pain is controlled with morphine. CT results reviewed with the patient.

CRITICAL CARE TIME 45 MINUTES FOR DIAGNOSIS: ACUTE CHOLEDOCHOLITHIASIS WITH POSSIBLE EARLY ASCENDING CHOLANGITIS

Ordered Meds List: No Current Medications Available

Radiology:

Preliminary radiology interpretation based on my review pending official read:

CT abdomen and pelvis with contrast

Distended gallbladder without free fluid or free air.

EXAM: CT ABDOMEN/PELVIS W/ CONTRAST

HISTORY: REASON FOR ABDOMEN: RIGHT UPPER QUAD PAIN

PATIENT CLASS: ER

IV contrast CT of the abdomen and pelvis of this 87-year-old nonobese female who complains of right upper quadrant abdominal pain and who has had hysterectomy and bilateral breast implants is presented without comparative images.

The upper and lower urinary tracts appear nonacute. The uterus is absent and ovaries are not visualized.

The liver appears nonacute. The gallbladder is huge without wall thickening and I see no choleliths. The gallbladder measures 5 cm x 6 cm x 12 cm length. The CBD measures 16 mm diameter. There may be a 5 mm x 8 mm calculus within the distal CBD versus the papilla of Vater not further differentiated. The pancreas is moderately fatty. There is moderate fluid within the stomach and proximal small bowel. No small bowel obstruction. The partially visualized vermiform appendix appears nonacute. Moderate intestinal gas with minimal colonic feces.

SUMMARY:

1. Normal upper and lower urinary tracts.
2. Prior hysterectomy with ovaries not visualized.
3. Bilateral breast implants.
4. Nonacute liver. Huge size of the gallbladder and CBD. Possible soft stone in the ampulla of Vater. I recommend abdominal sonography with emphasis to the gallbladder.
5. Prominent DDD/DJD lumbar spine. Previous surgery L4 on left.
6. No bowel obstruction.

EKG:

Sinus rhythm

rate 89

Normal axis

Normal intervals

Nonspecific ST segment and T-wave changes

NOTE:

Review of Diagnostics

I have personally reviewed and interpreted the results of the diagnostic findings as ordered, including the need for these tests based upon the history and physical exam performed to assure we rule out any emergent/urgent findings.

This also includes my independent review and analysis of any EKG or radiographic study as ordered, as timely preliminary interpretation is important to the care of the patient. Any pertinent findings will be addressed as needed, as well as relayed to the patient or appropriate party so they are aware.

MDM

89-YEAR-OLD FEMALE PRESENTS TO THE ED WITH SEVERE RIGHT UPPER QUADRANT AND EPIGASTRIC ABDOMINAL PAIN OF UNCERTAIN PROGNOSIS. CONCERN FOR ABDOMINAL AORTIC ANEURYSM, ACUTE CHOLECYSTITIS, ACUTE PANCREATITIS. After careful history, physical exam, vital signs, and review of any laboratory or diagnostic data as ordered, I HAVE DEEMED THE PATIENT HAS EXCEEDED THE RESOURCES AND/OR SERVICES AVAILABLE AT OUR FACILITY. THE PATIENT HAS BEEN STABILIZED TO A POINT THAT I FEEL IT IS SAFE TO BE TRANSPORTED AND FURTHER DETERIORATION COULD HAPPEN IF THE TRANSFER WAS DELAYED. I HAVE DISCUSSED PERTINENT HISTORY, PHYSICAL, AND DIAGNOSTICS WITH THE ACCEPTING FACILITY. PLEASE SEE THE COBRA FORM FOR FURTHER DETAILS.

EXTENSIVE CONVERSATION WITH [PATIENT] REGARDING NEED FOR ESCALATION OF CARE INVOLVING TRANSFERRED TO A HIGHER LEVEL OF CARE FOR FURTHER EVALUATION AND MANAGEMENT. [PATIENT] VOICES UNDERSTANDING AND IS IN AGREEMENT WITH PLAN. I do not feel any further imaging or laboratory data is needed at this time. I have considered both emergent, urgent disease pathology, and the current **DIFFERENTIAL DIAGNOSIS** including but not limited to:

Diagnosis Today

Problem: Choledocholithiasis with acute cholecystitis, **ICD Code:** K80.42, **Status:** Active, **Addressed Date:** 07/12/2026

Problem: Abdominal pain, right upper quadrant, **ICD Code:** R10.11, **Status:** Active, **Addressed Date:** 07/12/2026

Problem: Leukocytosis, **ICD Code:** D72.829, **Status:** Active, **Addressed Date:** 07/12/2026

Plan

TRANSFERRED TO SGMC ED IN STABLE CONDITION

Narrative Notes

87 y/o F presents to the ED via POV with a chief complaint of midline abdominal pain. Pt ambulated to 2 where vitals were obtained and recorded. Pt reports that symptoms began five ours ago. Pt rates pain 7/10 describing it as cramping. Pt reports that she has had mutiple episodes over the last few days following eating but tonight the sensation would not go away. Pt denies taking any medications prior to arrival. Pt placed on monitor at this time. Pt A&O x 4, steady gait, shows NAD with even and unlabored breathing. Provider aware. Side rails x2, call light within reach.
--

Patient C/O of pain in midline abdominal area. Rated pain a 7on pain scale 0-10 which increasses upon palpation. Will continue to monitor.
