Procedure

The patient required 30 minutes of critical care time

Due to a high probability of clinically significant and/or life threatening deterioration the patient required my highest level of preparedness to intervene emergently and I personally spent this critical care time directly and personally managing the patient. This critical care time included obtaining history, examination, pulse oximetry, cardiac monitoring, ordering, and review of studies. Arranging urgent treatment and management of plan. Critical care time also included patient's response to treatment, frequent reassessments, and discussions with other providers. This critical care time was performed to assess and manage the high probability of imminent life-threatening deterioration that could result in multi-organ failure and/or death. It was exclusive of separately billable procedures and treating other patients and teaching time.

Medical Decision Making

Differential diagnosis:

1. Homelessness
2. Dyspnea on exertion
3. CHF
4. Electrolyte derangement

The patient is well appearing, and nontoxic. After careful history, physical exam, vital signs, and review of any laboratory or diagnostic data as ordered, I made the decision the patient does not appear to have a life threatening illness and can be carefully discharged with close follow-up. I do not feel any further imaging or laboratory data is needed at this time. I have considered both emergent and urgent disease pathology. I have given written and verbal discharge instructions, as well as the current differential diagnosis. Patient

advised of the importance of following up with their PCP concerning findings, treatment, and status post treatment. All laboratory, radiology, respiratory, and assessment findings were reviewed in detail with the patient. Patient was educated on all prescriptions and proper usage as well as the importance of following up with primary care in a timely fashion for ongoing health and wellness management. The nursing staff has reiterated the disposition plan as well.

Reexamination/Reevaluation

Patient is stable at time of discharge. DC home independently.

Thank you for choosing our Emergency Department for your healthcare needs. Please take your medicines prescribed as directed and be sure to follow up with primary care provider within the next 1-2 days for a recheck. All medical problems cannot be reasonably diagnosed in the Emergency Department today. Return for any changes or concerns, including if your condition worsens or does not improve or if you are unable to obtain follow up. Some final results, included radiology reports, do not return same day, but are available on the patient portal or can be obtained through your primary care provider.
