Procedure

CC time: 265 min

Due to a high probability of clinically significant and/or life-threatening deterioration the patient required my highest level of preparedness to intervene emergently, and I personally spent this critical care time directly and personally managing the patient. This critical care time included obtaining history, examination, pulse oximetry, cardiac monitoring, ordering, and review of studies. Arranging urgent treatment and management of plan. Critical care time also included patient's response to treatment, frequent reassessments, and discussions with other providers. This critical care time was performed to assess and manage the high probability of imminent life-threatening deterioration that could result in multi-organ failure and/or death. It was exclusive of separately billable procedures and treating other patients and teaching time.

Medical Decision Making

17 yr old male presents with extensive area of induration right buttock extending into the right perianal area. Noted tachycardia and leukocytosis. Vancomycin ordered. Discussed need for further evaluation, surgical, not available at this facility with Grandmother.

Reexamination/Reevaluation

Grandmother reports discussed transfer with father and requests transfer to AMH.

1542-AMH transfer center contacted, do not accept pediatrics.

1546-Family requests transfer to SGMC.

1645-labs reviewed with a noted elevated blood glucose and Agap. Discussed with patient family at bedside with no reported history of diabetes.

1714-Repeat FSBS 459. Ph 7.31. Ct pending. Insulin drip ordered. Patient CA&x4. Contact radiology for Ct results, "they moved it up".

1820-Ct results noted and discussed with Grandmother.

1921-SGMC contacted for transfer. Awaiting return call.

1936-SGMC declined acceptance, no PICU.

1937-Discussed with family. Agrees to TMH or Phoebe.

1950-TMH contacted. HPI, findings and treatment thus far discussed with both Dr. Truman,

Insulin Drip DKA/HHS Protocol Intravenous Insulin Infusion

General Guidelines:

- 1) Goal blood glucose level = 140-180mg/dL
- 2) Standard drip: regular insulin 100units/100ml in normal saline via an infusion device (1mg/ml)
- 3) Insulin infusion should be discontinued when the patient's blood glucose has been in goal range for 3 consecutive tests along with anion gap <12 and bicarb >15

Labs:

- 1) Initial/STAT labs:
 - a. Blood glucose POC, serum osmolality, urinalysis, urine culture, metabolic panel II, magnesium, potassium
 - b. Blood cultures x 2 (if protocol initiated on admission)

Do not initiate insulin infusion if potassium is less than 3.3mEq/L; notify practitioner immediately

- 2) Recurring labs:
 - a. Blood glucose POC every hour
 - b. Metabolic panel I every 4 hours x 6 (4 hours after initial metabolic panel II)

Patient Weight (kg)	Initial IV Regular Insulin Bolus (0.1 Units/kg) (MAX 15-unit Bolus) No bolus if already given in ER	Regular Insulin 100 units/100 mL Drip Rate (0.1 Units/kg/hr)	Additional IV Regular Insulin Bolus ONLY if 1 hour goal is not met (MAX 15-unit Bolus)
<50 kg	4 units	4 units/hr	4 units
50-60	6 units	6 units/hr	6 units
61-70	7 units	7 units/hr	7 units
71-80	8 units	8 units/hr	8 units
81-90	9 units	9 units/hr	9 units
91-100	10 units	10 units/hr	10 units
101-110	11 units	11 units/hr	11 units
111-120	12 units	12 units/hr	12 units
121-130	13 units	13 units/hr	13 units
131-140	14 units	14 units/hr	14 units
>140	15 units	15 units/hr	15 units

Bolus and Starting doses greater than 15 unit/hr must be specifically ordered by practitioner; notify practitioner immediately for order

Initiation:

- Give bolus, if not already given in Emergency Department
- Initiate drip based on patient weight
- Initiate intravenous fluids
 - o Normal saline at 1000ml/hr for 2 liters unless other fluid or rate ordered by provider
 - o Then decrease to normal saline at 150ml/hr unless other fluid or rate ordered by provider

First Hour of Infusion: Goal is to decrease blood glucose by 50 – 100 mg/dL per hour

- If blood glucose does not decrease by at least 50mg/dL:
 - o Give additional bolus for last column
